EDUCATION

San Jose State University

B.S. Data Science | Relevant: ML, Algorithms, Databases, Operating Systems, Web Development

Expected May 2027

EXPERIENCE

Software Engineering Intern

UL Solutions

May 2025 – Aug 2025

San Jose, CA

- Built Python data pipelines covering 20+ RF device categories with 100% dataset accuracy; refactored legacy validation modules cutting test setup 60s → 40s (+33%) and boosting throughput 25%; changes adopted across full RF test suite in production.
- Designed structured validation schemas reducing review cycles 3 → 1; authored internal documentation cutting engineer onboarding time ~40%; expanded automated pipeline coverage from 12 → 20+ device types.

Product Developer: SGConsulting RAG Agent

Applied Engineering @ SJSU

Jan 2025 – Apr 2025

San Jose, CA

- Led 3-engineer team to design and ship a production RAG customer service agent; owned Jira sprint planning, system architecture, and weekly stakeholder communications end-to-end through launch.
- Built LangChain + ChromaDB + GPT-4 retrieval pipeline; RAGAS evals: faithfulness 0.83, answer relevancy 0.81, context recall 0.89; LangSmith tracing: 5.25s latency, \$0.0065/query.
- Deployed via Docker + GitHub Actions CI/CD with pytest suite and zero-downtime releases; authored technical runbooks adopted by client engineering team.

AI Developer: Bloom Energy Infrastructure Planner

Applied Engineering @ SJSU

Mar 2025 – Present

San Jose, CA

- Building MCP-powered agentic deployment planner; custom MCP server exposing tools for feasibility checks, dependency resolution, and deployment path generation over an 8-dimension constraint graph (compute, power, cooling, permitting, interconnect, latency, location, onsite generation).
- Agentic workflow reasons across constraint dimensions to surface viable infrastructure paths; stack: Next.js, FastAPI, LangChain, React Flow.

PROJECTS

Wardrobe IQ: AI Personalisation System | github.com/VeedhiBhanushali/Phia-wardrobe-intelligence

2025

- Built three-signal purchase intelligence system solving cold-start personalisation and return-rate prediction: taste extraction via FashionCLIP (ViT-B/32, 800K Farfetch fine-tune) from Pinterest boards at zero purchase history, session intent inference from browsing coherence, and wardrobe-integrated purchase confidence scoring.
- Achieved +102% taste relevance vs. random baseline, +52% vs. popularity ranking at zero saves; +13.3% P@10 lift from intent blending; 69.5% purchase confidence accuracy vs. 50% random.
- Engineered agentic stylist: multi-turn Claude Sonnet 4 with 4 live tools (search_catalog, curate_outfit, build_outfit, analyze_wardrobe), SSE streaming mixed content, FAISS IndexFlatIP over 2,364-item catalog, MMR reranking ($\lambda=0.7$); stack: FastAPI, Next.js 15, Framer Motion.

Bridge: Student Decision Intelligence Platform | bridged.vercel.app

2024 – Present

- Founded platform to eliminate high-stakes decision failures for international students; built stage-aware engine surfacing the next critical action per user journey; shipped 25+ features across Next.js web and React Native mobile on AWS microservices; ran 200+ experiments improving adoption 15%.

Real-Time Fraud Detection System | <https://github.com/VeedhiBhanushali/fraud-detection-system>

2024

- Processed 1M+ transactions/day at 99% accuracy and 93% recall using LightGBM + ADASYN for class imbalance; reduced inference latency 250ms → 150ms via Redis caching; event-driven Kafka + FastAPI pipeline with autoscaling Docker on AWS; 25% reduction in false negatives.

LEADERSHIP

President, Applied Engineering @ SJSU — Co-founded and scaled student-run software agency to 100+ members; shipped production AI and software systems for industry clients including SGConsulting and Bloom Energy; recruited and managed cross-functional teams across engineering, product, design, and partnerships.

Program Management Director & Mozilla Campus Ambassador — Led Mozilla partnership at SJSU promoting open-source and responsible computing; grew Responsible Computing Club membership +190%; hosted Tech4Good reaching 350+ students.

Student-at-Large of Operations, SJSU — Elected to allocate university funds and oversee operational decisions across 40,000+ students; served as House President (360+ students) and R&D Head across 70 schools.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, R, HTML/CSS

AI / ML: FashionCLIP, FAISS, LangChain, LangGraph, RAG, LightGBM, scikit-learn, Anthropic Claude API, OpenAI API, Agentic Systems, MCP, Embeddings, Vector DBs

Backend & Infra: FastAPI, Node.js, Spring Boot, AWS, Docker, Kafka, Redis, PostgreSQL, Supabase, Pinecone, CI/CD, GitHub Actions, Microservices

Frontend: Next.js 15, React, React Native, Tailwind CSS, Framer Motion, Server-Sent Events
